

## **PEDI Acquires Plastic Injection Molding Company Nytronics**

**Carlsbad, CA – Feb. 9, 2007** – PEDI (Plastics Engineering & Development, Inc.) acquired the assets of Nytronics, a San Marcos, CA-based plastic injection molding company, in an all cash deal. Terms of the transaction were not disclosed. PEDI is a custom injection molder of medical and biomedical devices and electronic components with sub contract manufacturing capability. The acquisition gives PEDI an expanded customer base and alleviates a production capacity constraint for Nytronics, said Jack Sparacio, President & CEO of PEDI. Bruce Claude of Nytronics has agreed to remain with the business for one year.

The opportunity to easily consolidate the business in addition to a strong long-term customer base was the primary reason for the acquisition.

### **About PEDI**

Since 1985, a full service contract manufacturer and custom plastic injection molding company. PEDI can manufacture a single component or handle every aspect of a product's development from design, tooling and molding to ultrasonic welding, assembly, and packaging. PEDI specializes in the medical and biomedical device markets with additional expertise in manufacturing implantables using PEEK™ material. Other industries served include electronics, consumer, industrial and recreation products. PEDI holds a California FDB Device Manufacturing License and operates a 50,000 sq. ft. facility with a Class 100,000 cleanroom in San Diego County.
